

Ulan Tursunbek

Front end developer

Bishkek, Kyrgyzstan

I'm a Frontend developer with 3+ years experience and an insatiable appetite for learning.

My primary passion lies in converting design and ideas into intuitive, dynamic user interfaces with an exceptional user experience. As a well-organized problem solver, I relish any challenge that comes my way and strive to deliver top-quality solutions that exceed expectations.

In addition, in the past I spent a decade of my life as a successful DJ and stand-up comedian, and then I decided to move into the field of development, where I fell in love with coding. Also I am a current supporter of FC Arsenal, London.

Having the experience of making a great career change after 30, I want to support other people in this journey. That's why I started my blog. And this blogging has already made me a participant of IT conferences in my native country.

♥ Interests

In my previous career, I was an ex-stand-up comedian, and outside of work, I am a big fan of football, particularly Arsenal FC, London. I have a passion for reading, having devoured over 400 books.

📅 Experience

2021-10 -
CURRENT

Datarockets

Front end developer

- Convert user needs into code that can expand to meet the growing needs of the business, produce prototypes, and make sure they match the client's business requirements.
- Develop new and reusable elements that are simple to integrate into a project based on a design system.
- Create a website and user interface for a startup tech firm that offers web development services.
- Incorporate third-party APIs such as Google Maps and implement features such as scrolling pagination.
- Lead a team of three developers and take charge of the front-end section of the application.

2021-04 -
2021-10

Argenta

Front end developer

- Improved the performance of an application that utilizes maps and graphics for data visualization.
- Extended the functionality of the application and optimized the code, resulting in more seamless operations and increased user engagement.

2021-02 -
2021-04

Kovan

Front end developer

- Transformed the user interface (UI), user experience (UX), and overall design of an application, upgrading it from legacy code to single-page application (SPA) logic.
- Conducted profiling, troubleshooting, and resolved software bugs to fine-tune the system's performance.

2020-04 -
2021-02

Skillcrucial

Full stack developer

- Collaborated with a group of designers and programmers to design and develop sleek and responsive interfaces, delivering intuitive user experiences.
- Created coding challenges and training sessions for students to enhance their coding skills.
- Executed unit and end-to-end tests to identify any errors and enhance the loading speed of the application.
